IoT Lone Worker Protection

Providing the best IOT safety solutions
to protect the welfare of your employees

Together with

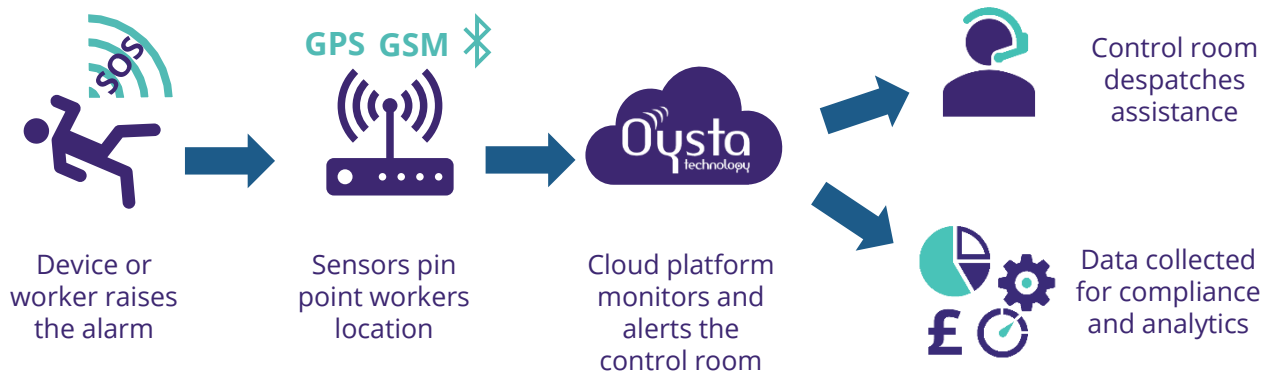

Overview

Working alone is a daily occurrence for almost 6 million people in the UK. Lone workers face the same hazards at work as anyone else, but there is a greater risk because they may not have anyone to help or support them if things go wrong.

Employers of lone workers have a legal duty to ensure the health, safety and welfare at work of their employees. For lone workers, this includes regular contact, monitoring, location tracking at pre-agreed intervals and a reliable system to ensure the employee has returned to base once they have completed their task.

The combination of increased numbers of lone workers and more robust legislation around duty of care means that organisations are under pressure to ensure that their teams are safe and secure as they work.

IOT safety solutions to protect the welfare of your employees

IoT can play an important part in meeting these challenges, whilst improving productivity and maintaining health and safety compliance. Mobile devices and sensors connected to a cloud platform can monitor and track the lone workers (in and outdoors), auto-alerts can then be set up for inactivity, non-appearance, being off site, and trips or falls.

The users can summon assistance with a panic button and can easily communicate back and forth to the control room via their device. The cloud platform can provide monitoring with live reporting and analytics.

IoT Lone Worker Protection

Bell integration and O2 are working with Oysta's technology employing IOT to protect employees who are working alone or out of sight to colleagues.

Oysta's technology combines powerful GSM, GPS and innovative indoor tracking technologies, together with a range of devices which provide alerts and checks.

Oysta's MyTraQ software connects with any third party mobile phones and allows the user to *set up safety zones, emergency protocols and easily track and trace the device.*

Oysta IntelliCare platform provides monitoring, tracking, alerts and reporting. Oysta's TeleCare control centre staff can then get in contact with the lone worker, and send any required assistance to their exact location.

We can provide **bespoke managed services** to fit the specific needs of your organisation, starting with an assessment of your workplace. We would create a personalised lone worker plan, and then provide the right solution to ensure your employees have the best possible lone worker support available.

The Benefits

Improved Safety – Having the proper processes in place to report incidents and safeguard against dangers.

Compliance - Avoiding the financial penalties and potential bad press linked with not fulfilling duty of care for your lone workers.

Cost Reduction - Repeated incidents and poor safeguards will lead to reduced staff morale, absenteeism, lost productivity, higher staff turnover and recruitment costs.

User friendly - Utilising cutting-edge technology with simple user-friendly devices. Many of our solutions are ready to use out of the box.

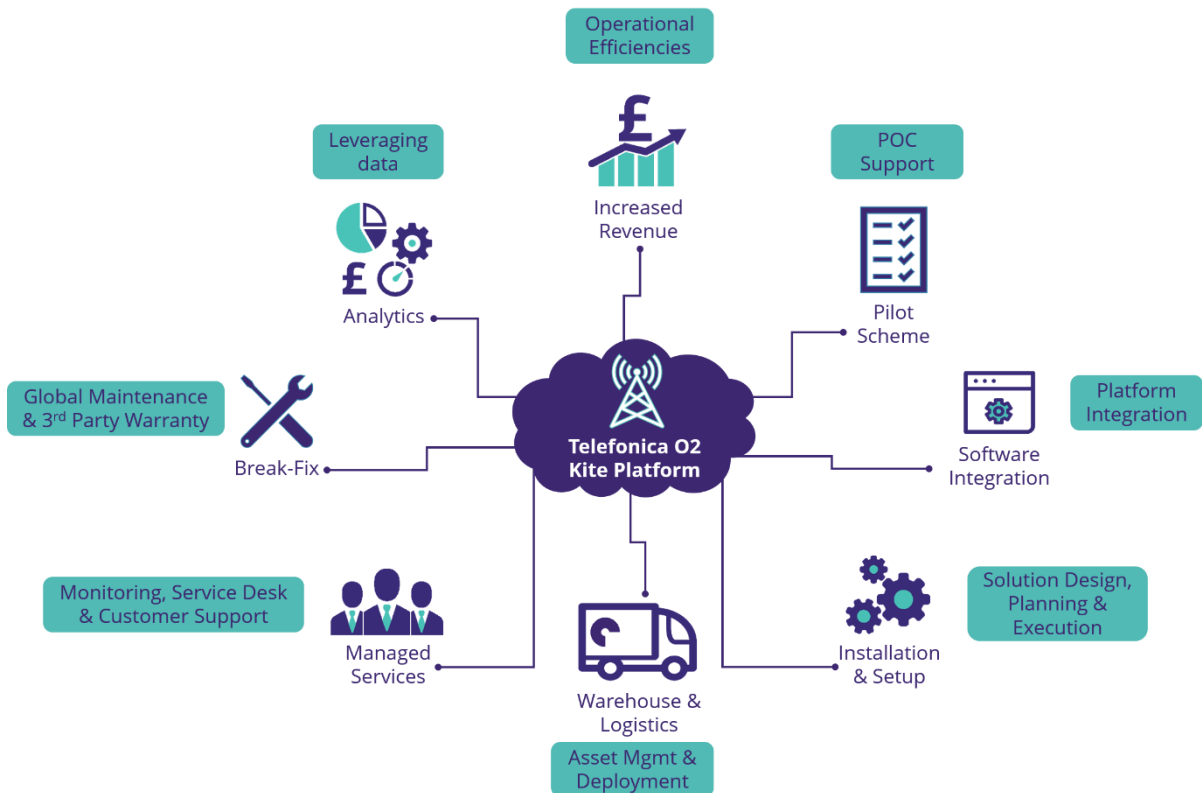

Features

- **Track & Trace VIA GPS**
- **One Touch SOS-button**
- **Out of zone alerts**
- **Trip and fall detection**
- **Amber alert status to pre-empt dangerous situations**
- **Fixed time reporting**
- **Additional sensors, products and services available**
- **Real time reporting and analytics**
- **Cloud based platform**

How Bell Integration Can Help

Delivering value from a connected world of things requires internet connected solutions. Working with O2, Bell Integration brings the experience in building supply chain ecosystems that enables you to deliver faster scalable solutions in an ever-evolving world.

We Deliver An End To End IOT Capability

Bell Integration distinguishes itself by not simply being a device manufacturer or a standalone service management company.

We deliver an end to end capability, from procurement, asset management, logistics, deployment and ultimately customer support in a multi-vendor world. We have over 20 years' experience in this capability.
