TrackEat

Reduce the risk of infection and ensure your restaurant, pub or café is in full compliance with government Covid-19 legislation

Together with

Overview

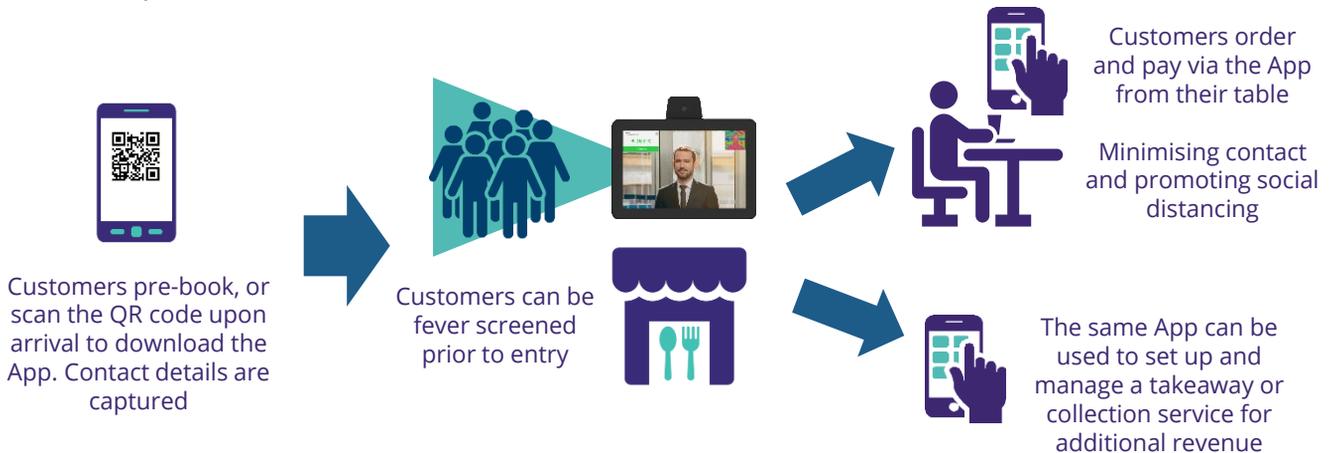

Restaurants and pubs must adhere to new government guidelines to help reduce the risk of infection of Covid-19 to their customers and employees.

In order to ensure that businesses are able to remain open, the government has mandated that customers who visit pubs and restaurants must provide their contact details to assist NHS Test and Trace, as well observing best practises for social distancing.

Venues therefore must have a system in place to ensure that they can collect contact information as well as processes that minimise contact, reduce congestion and the need for customers to queue.

Minimising contact between front of house workers and customers at points of service is also advised. Guidelines also include minimising customer self-service and promoting the use of contactless payments where possible.

Any business that is found not to be compliant with these regulations will be subject to financial penalties.

IoT has a significant role to play in helping restaurant owners and landlords to quickly adapt and address these challenges, as well as providing the additional benefits of streamlining processes, reducing waste, creating additional revenue and lowering costs.

Bell Integration working with O2 and select partners has a range of IoT products and services that helps businesses return to the new normal. We provide solutions which help mitigate risk through fever screening and enforced social distancing.

Overview

Working with Entopy, Bell Integration can provide access to the latest technology to digitally transform your pub, café or restaurant and comply with Covid-19 government guidelines.

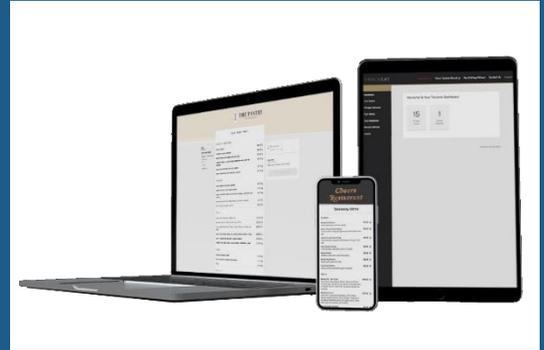

The TrackEat platform enables businesses to set up and manage a professional takeout, delivery and table ordering service.

Restaurants, cafes, pubs and shops can create an online menu, take orders and payments online, manage orders as they come in, facilitate pre-orders, arrange table bookings and manage the delivery or collection of orders.

Customers register their details when they pre-book or when they order to assist NHS Test and Trace. Ordering and paying through the App from their table allows patrons to observe best practice for minimising contact and maintaining social distancing.

In addition to TrackEat, Bell also provides thermal camera and tablet solutions to enable businesses to temperature screen visitors, staff and customers prior to entry, helping to limit the risk of contamination.

TrackEat

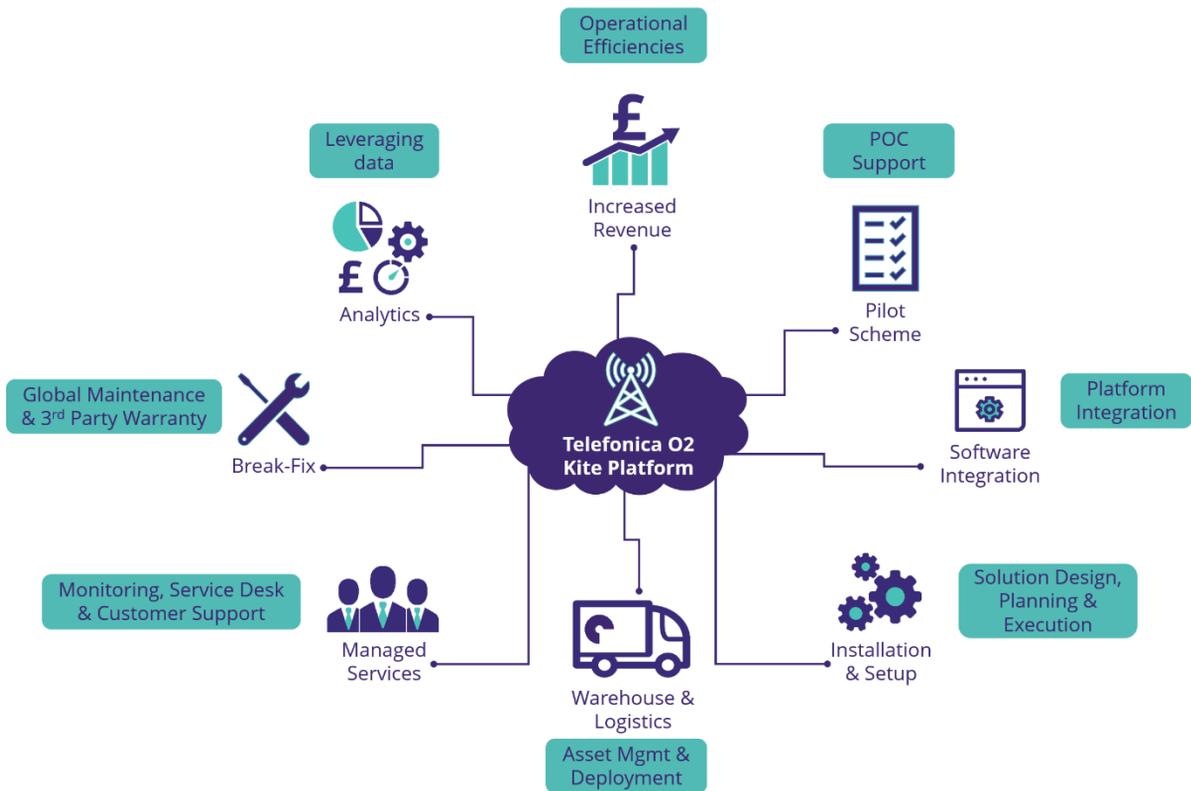

Features

- **Customers download the App when they arrive or pre-book**
- **Patrons order from the table to avoid queuing at the bar**
- **Payment using the App to promote contact-less**
- **Easily collect customer contact data, in line with Track and Trace regulations**
- **Fever screen customers and staff before entry, with Bell's optional thermal scanning solutions**
- **Comprehensive back-office suite to help manage orders, deliveries and collections**
- **Fast and easy to deploy**
- **Additional products and services available**

How Bell Integration Can Help

Delivering value from a connected world of things requires internet connected solutions. Working with O2, Bell Integration brings the experience in building supply chain ecosystems that enables you to deliver faster, scalable solutions in an ever-evolving world.

We Deliver An End To End IOT Capability

Bell Integration distinguishes itself by not simply being a device manufacturer or a standalone service management company.

We deliver an end to end capability, from procurement, asset management, logistics, deployment and ultimately customer support in a multi-vendor world. We have over 20 years' experience in this capability.
