

Accelerate Innovation through the Advanced Technology Centre

WWT's advanced technology centre is a lab like no other, accelerating technology decision-making and de-risking technology acquisition through a vendor agnostic lab environment

A Comprehensive End-to-end Approach

The Advanced Technology Centre (ATC) provides a collaborative ecosystem for education, and helps our customers to design, build, demonstrate and test innovative technology products and integrated architectural solutions.

Bell has significant experience in planning, orchestrating and deploying new technology and digital transformation projects on time and within budget.

This partnership offers a complete portfolio of services to reduce the cost, time and risk that comes with modernising enterprise hybrid infrastructure.

Clients benefit from the ATC as a platform to build customised integrations to meet their specialised business demands.

The ATC Lab provides 24/7 access to technology evaluation and live testing that includes product, application and platform comparisons, product benchmarking, design validation, migration support, functionality testing, PoC and testing for integration into public cloud platforms.

Customers can explore, evaluate & gain hands-on access to a variety of technologies

Harness WWT's ATC lab to compare multiple vendor solutions

Validate your design to ensure the best possible fit

Utilise our buying power, engineering and logistics to enable rapid deployment

Access proven migration methodologies to reduce risk and speed up integration

We offer our customers more value and more support, arming decision makers with new technology capabilities to keep pace with change.
