We help organisations operating in every industry sector accelerate the deployment of IoT technologies that will **enable new levels of innovation, operational efficiency**, real-time performance tracking and intelligence.

With over 20 years' expertise building IoT ecosystems, we know what it takes to derive value from the connected IoT world. Our fully managed end-to-end services encompass everything you'll need to achieve scalable and secure IoT deployments and accomplish your business goals faster.

From proof of concept development through to technology stack selection, provisioning and deployment at scale, we can handle everything from architecture design to data analytics implementation and beyond.

Our fully managed IoT solutions include

Giving you all the services and expertise you'll need at every stage of your connected IoT journey, we'll help you innovate faster and keep your vision future facing.

Let Bell Integration design, build and run your IoT architecture, leaving you free to focus on value creation.

From proof of concept development through to technology stack selection, provisioning and deployment at scale, we can handle everything from architecture design to data analytics implementation and beyond.

Our end-to-end solution includes:

Design - Having assessed every aspect of your IoT project requirements, we'll evaluate your existing IT architecture, standards, security and business models. Our end-to-end design and development service covers devices/sensors, cloud and mobile/web applications.

Staging - We handle the procurement of your IoT devices, managing all asset storage, logistics and management prior to deployment on your behalf. Handling everything from asset assembly and registration to pre-configuration and SIM activation, we streamline and assure a smooth rollout.

Deployment - We take care of everything from API design and provisioning, application launch to network engineering and implementation, data warehouse design and engineering, as well as your data analytics implementation. As part of this process we'll undertake:

- Device and network security testing, deployment and activation
- Deployment of any IoT analytics solutions
- Enable secure and shared information services across your business network and/or supply chain
- Cloud Infra and RTD platform provisioning
- Initiate connectivity with Wi-Fi or cellular networks, gateways, web interfaces and apps

Run - With IoT you almost never deploy and forget. Which is why we provide an extensive choice of post-deployment managed services that will ensure your IoT ecosystem operates optimally at all times.

In addition to taking care of all hardware break/fix callouts and providing continuous monitoring/alerting services for your extended IoT environment, our fully managed service also features a 24x7 Service Desk and customer support.

To minimise any risk of disruption that could impact your real time data capture, Bell Integration has developed smart automation to ensure that any managed IoT device that develops a problem, triggers an automated process that registers and deploys a replacement to site.

Driving efficiency and value across every vertical

Whether you're looking to launch a new IoT initiative or are looking to upscale an existing IoT application, our end-to-end IoT services address every aspect of the IoT ecosystem - from device procurement to solution planning and design, deployment, data analytics, ongoing maintenance and management, and more.

Providing a fully managed IoT solution, designed to achieve the best possible outcome

Contact us

From offices in London, Portsmouth, Wokingham, Glasgow, Krakow, Hyderabad and Singapore, we work with local and global customers across Europe and Asia-Pacific to streamline every aspect of their IT management strategies to maximise efficiencies and increase their ROI, year on year.
