Designed to help you embrace change, **navigate the complexities of digital transformation, and get to value faster**, our Cloud Services arm you with all the insights and know-how needed to ensure your cloud strategy will support your organisation's short and long term strategic goals.

Done right, the cloud can be a powerful catalyst for business transformation, innovation, and growth

But with so many hosting options to choose from, and enterprise strategies evolving at breakneck speed, accurately assessing your current and anticipated cloud hosting needs is key for assuring a successful and sustainable cloud journey.

Committed to giving you clarity on what to do – and why – we'll ensure you can:

- Identify when to utilise services from a public cloud provider – and when it's better to build or maintain capabilities elsewhere
- Create a foundation for next generation solutions – like AI, IoT, edge computing and advanced data analytics
- Contain cloud costs – without compromising performance
- Make architecture choices that won't limit your modernisation aspirations
- Take advantage of technologies – like Kubernetes that make it easy to containerise workloads and services for enhanced portability.

We know you need to make some smart decisions where your cloud strategy is concerned and that you need to **get to your cloud destination in a predictable and risk-free way.**

Why Bell Integration

Our specialist services are designed to address every phase of your project – from initial planning to transition and then the management and optimisation of your cloud environment.

Plan and assess - We begin with a current state analysis of your IT estate and workloads to create a comprehensive end-to-end view of your application landscape and data security and governance needs. We then scope in detail your modernisation vision, incorporating the aspirations of all key stakeholders.

Utilising our vendor-agnostic advisory services, you'll then be able to determine which cloud platforms and hosting options represent a best fit for your application and infrastructure needs. Along the way we'll provide recommendations on how to cost-optimize your consumption of cloud services.

Deploy and migrate - Our Workload Migration service accelerates the transition of applications and infrastructure to your new cloud architectures.

Having migrated tens of thousands of workloads on time, and on budget, Bell has enormous experience in this arena. Utilising our industry-leading vClarus methodology and tools, we'll ensure your migration is correctly sequenced and coordinated. Our ecosystem-wide framework assures consistent risk management and provides continuous robust governance of the entire process.

Alongside benefitting from continuous protection and compliance across multiple environments concurrently, **our approach ensures business-as-usual operations can be maintained at all times.**

Manage, monitor and optimise - We'll take care of the day-to-day management of your cloud infrastructure. In addition to handling all routine monitoring and maintenance tasks, we'll ensure all your business critical systems and applications continue to perform as expected.

We'll also identify opportunities for efficiency gains and service improvements that make it easy to accommodate changes to your environment fast. Dealing everything from provisioning to monitoring your providers' SLAs, we'll eliminate pain points and support you whenever you need to evolve and update your environment in line with changing business needs.

Our 24-7 Cloud Managed Services give you dedicated round-the-clock services, tailored to the exact needs of your business, at a fixed and predictable cost.

Unlock the benefits of digital transformation with Bell Integration

We help organisations to jump-start innovation. Making it faster and easier to activate new digital services and capabilities that deliver competitive advantage. Our end-to-end cloud solutions ensure that nothing is left to chance and we help our customers to:

- **Drive down costs** - through selecting the best possible solution and appropriate vendor, whilst ensuring that your cloud environment is continually optimised and correctly provisioned
- **Improve productivity** - by providing fast, reliable and flexible user access that improves collaboration and streamlines workflows with automation
- **Provide scalability** - with an infrastructure that can flex to meet the demands of your business
- **Enable a robust infrastructure** - improving up-time and security with a reduced risk of data loss and cyber breach
- **Increase agility** - with a cloud environment that provides a quicker time-to-market enabling the business to continually deliver innovative products and services faster than their competition

Wherever you are on your cloud journey we can help you access to the best possible cloud solution to meet your needs.
