

Cloud Migration

Accelerate your move to AWS, Azure and other cloud platforms

To help **ensure your move to the cloud is done right**, we'll guide you through the foundational core decisions that will affect the outcomes of your cloud adoption journey.

Designed to get you to the cloud faster, with all the security and performance you'll need to meet both current and future organisational goals, our Cloud Migration service ensures your infrastructure and applications are optimised to take full advantage of everything the cloud has to offer.

Our Cloud Migration service ensures:

- You choose the right cloud provider/model to achieve desired operational outcomes
- Every application performs as expected in the cloud
- Interoperability issues with other cloud-based and on-premises workloads are addressed
- Your new cloud environment is configured to deliver the capacity, performance, utilisation, security, compliance and availability you'll need
- The integrity of your data/workloads is preserved and safeguarded
- You're able to optimise and manage cost across the environment

Underpinned by our industry-leading vClarus end-to-end methodology, our systematic approach **cuts through cost and complexity**, giving you a predictable and highly orchestrated migration process that delivers both agility and measurable value.

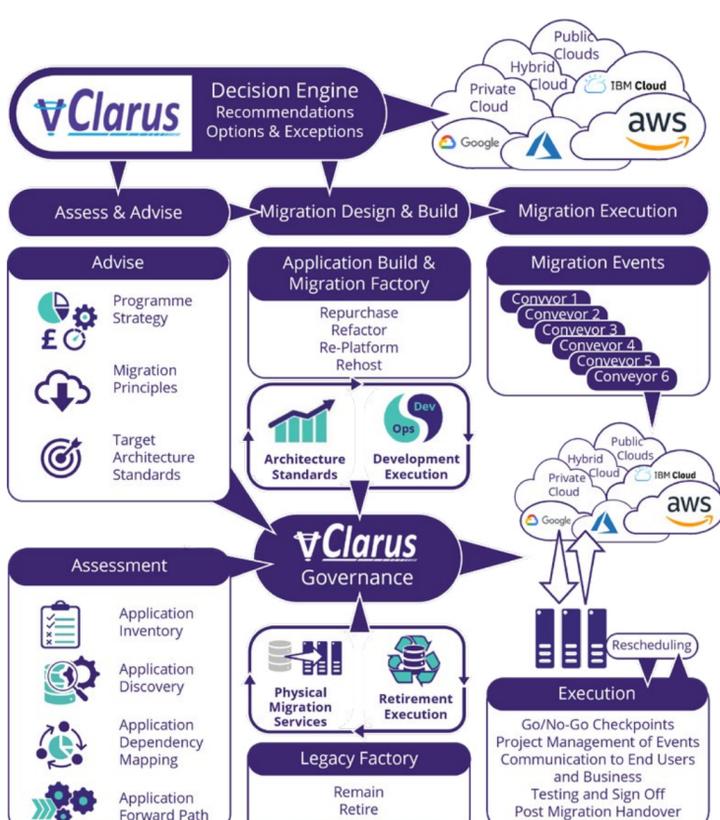

Why work with Bell

Cloud Assessment - The Best Fit

We start with assessing the size and complexity of your current environment and help you scope and define the immediate and long term goals you wish to accomplish. Armed with these insights, we'll help you determine which cloud model – public cloud, private cloud, multi cloud or hybrid cloud – will best serve your current and future needs. We'll also identify which cloud providers offer the best fit in terms of cost/capability/performance.

Having evaluated your current application resource requirements, we'll calculate your cloud server requirements so you can avoid buying more than you need.

vClarus - Our proprietary and exclusive IP

Workload Discovery - Mapping Your World

To ensure your migration goes without a hitch, we undertake a detailed discovery process to ensure every application candidacy is understood, potential data conflicts are addressed, and all dependencies between applications, infrastructure and business services are documented. This ensures your migration is sequenced correctly and that the right business and technical decisions can be made.

Migration Planning - Deep Insight

Having captured your entire environment, including all data flows, vClarus is now able to deliver a 360-degree holistic view of your business' life-cycle stage, integration, compliance and security requirements that will inform and define the migration strategy.

Armed with these insights, you can decide which workloads to refactor, re-platform, re-host, retain or retire and we can ensure your target environment is appropriately configured in readiness for the physical migration of services.

You'll also be able to forecast your AWS, Azure and other cloud platform costs, so you can avoid any unexpected surprises.

Migration Design - Mitigate Risk

With precise and accurate planning, your actual migration will prove plain sailing. Utilising vClarus, we define the guiding migration principles for each business service, detailing all steps required for each type of migration (refactor, rehost, re-purchase, re-platform). These process and work templates are then integrated into an application build and migration factory, and a detailed migration schedule is prepared.

Transition - Migrate on Time and Within Budget

Bell's vClarus migration methodology ensures we help you execute a seamless transition to your new cloud solution. A rigorous governance programme ensures that every migration event is correctly sequenced and appropriately managed and monitored to final cutover, ensuring that any issues can be resolved 'in flight'.

Our proven approach and methodology ensures you're protected from migration that industry analysts tells us typically add 30%-50% to the anticipated cost of most migration programmes.

Our Cloud Migration service is designed to get you to the cloud faster, with all the security, performance, and ease of management you'll need

Contact us

From offices in London, Portsmouth, Wokingham, Krakow, Hyderabad and Singapore, we work with local and global customers across Europe and Asia-Pacific to streamline every aspect of their IT management strategies to maximise efficiencies and increase their ROI, year on year.
