Designed to address growing concerns about data privacy and security at every stage of the IT asset lifecycle, **our comprehensive portfolio of services assure compliance** through our fully accredited facilities, processes and staff.

With over 25 years' experience in secure IT asset disposal (ITAD) and information security management, our fully accredited data sanitisation and data destruction services deliver full and fail-safe compliance with all applicable industry and regulatory standards

The rapid acceleration of digitalisation means that finding robust and compliant ways to manage the reuse or disposal of data-bearing IT assets is a growing concern for today's IT organisations.

Our service enables you to:

- **Securely dispose of end-of-life assets** - following the strictest environmental and data privacy guidelines
- **Decommission, refurbish and redeploy assets within the enterprise** - in an appropriate and compliant manner as if each item was a new asset
- **Maximise the value of retired IT assets** - using data sanitisation to unlock value through resale

From the physical destruction of hard disk drives to the sanitisation and erasure of data held on assets, **our fully accredited services are utilised by financial institutions and telecoms companies around the globe** who need to be certain they eliminate any risk of proprietary or regulated data leaks as a result of their ITAD activities.

Why Bell Integration:

Minimise the business risk of data security - Our experts are on hand to help you understand the detailed data disposal rules relating to redundant IT and AV hardware, together with the most appropriate destruction or data wiping methods to apply to any device featuring a data storage component: enterprise storage and servers, PCs, mobile devices, edge computing and IoT devices.

Enable a secure ITAD supply chain - We'll handle the secure de-install and transport of redundant assets to our ADISA accredited facility. All our engineers and drivers are securely vetted, and our vans are fitted with CCTV and tracking to provide a full record of the end-to-end process.

Protect IP and other sensitive data - To maximise the protection of assets with the very highest data sensitivity classification, our fleet of disk shredding vehicles can provide onsite data destruction of all types of hard and solid state drives, tapes, mobile phones, circuit boards and other IT related items. Activities can be monitored to provide time/date stamped video records of destruction for every asset.

Provide governance - Our data erasure and destruction procedures ensure your data is certified as being wiped to the correct level. Our highly resilient processes are all audited in line with ISO/IEC 27001 Information Security Management (ISMS) standards.

Certification and audit trails - We make it easy to demonstrate a complete audit trail and proof of GDPR compliance with Certificates of Destruction and Waste Transfer Notes that provide evidence of data eradication, together with detailed asset reporting.

Assuring IT compliance through our accredited facilities, processes and staff.

Contact us

From offices in London, Portsmouth, Wokingham, Krakow, Hyderabad and Singapore, we work with local and global customers across Europe and Asia-Pacific to streamline every aspect of their IT management strategies to maximise efficiencies and increase their ROI, year on year.
