Whether you currently have an on-premise, private hosted, hybrid or cloud infrastructure, we can help you **migrate to and manage** your disaster recovery backup solution.

Enabling organisations of any size to safeguard their business against failure during an outage. We ensure you can smoothly transition to the best possible solution, without overpaying or compromising performance.

Outsourcing the day-to-day management of your backup solution to the right service provider gives you access to round-the-clock services that provide your business with the ability to:

- **Recover fast** – operating systems, applications and critical business data can all be quickly restored, ensuring overall disruption is kept to a minimum
- **Improve future resilience** – with proactive monitoring underpinned by AI, which automates corrective actions and escalations that limit downtime and dramatically improve operations
- **Optimise for performance, efficiency and cost** – providing intelligence gathering to identify trends, performance, budget and business growth, ensures your solution is always relevant and modelled against your future capacity needs.

By eliminating the burden of managing and maintaining your backup solution, your IT teams will be **free to focus on more core requirements** and strategic initiatives.

Introducing Disaster Recovery from Bell Integration

Robust, Reliable and Ready

Ensuring your disaster recovery solution is resilient and relevant to your business needs

Our disaster recovery service options include

- **Lift and Shift** – We can re-home your data centre, providing all the planning, engineering, logistics and rental swing-kit required to smoothly relocate your existing environment its new location.
- **Cloud Disaster Recovery** – Providing a dormant 'like live' cloud based infrastructure, we provide a flexible scalable platform where your services and data are replicated from your production physical, cloud or hybrid platforms.
- **DR Transformation** – A fully managed DRAAS (Disaster Recovery As A Service) aligned to your business roadmap, covering, backup and restore, disaster recovery with scheduled failover testing.

Our five step approach ensures you achieve a smooth transition to your new DR solution:

- 1. **Assessment** -Of your organisation's IT environment, current requirements and available resources. We will advise .and ensure that these are aligned with the needs of your key business stakeholders.
- 2. **Discovery** - Providing comprehensive application and systems discovery, we evaluate all your current security, data, internal and external dependencies.
- 3. **Planning & Build** - We will provide a recovery plan, which includes a tiered approach to your data and applications with a focus on identifying what's mission critical. We enable a build that will help you control costs and doesn't compromise on internal service level agreements.
- 4. **Migration & Deployment** - Our holistic and highly orchestrated approach reduces complexity, and ensures a smooth migration and fast deployment.
- 5. **Monitoring & Management** - Providing proactive monitoring and managed services underpinned by AI, we will ensure your DR solution is fully managed and always available.

Resilience and Continual Optimisation

Dedicated to **ensuring your backup solution runs efficiently and consistently**, we can take on full or partial responsibility for your disaster recovery environment.

We help organisations fast track their DR migration projects, so that they can safeguard their businesses quickly and efficiently – with no costly overruns or service disruptions for users
