Our proven practices save you time, money and effort. Enabling you to gain an accurate record of what's in your IT environment, so you can **improve asset utilisation, eliminate waste** and drive increased value.

Our asset management service is designed to ensure you're able to efficiently manage the lifecycle of your organisation's IT assets.

Achieving a centralised view of IT assets, from procurement to retirement, is the key to making best use of existing resources – and optimising ongoing purchasing decisions and strategy.

By gaining increased visibility of your organisation's hardware, software, and network assets, you'll be able to:

- **Improve asset utilisation** – making best use of existing resources
- **Avoid over provisioning** – maximising usage against current needs
- **Achieve increased accountability** – and compliance
- **Undertake strategic inventory planning** – and contain costs
- **Manage asset retirement** - Avoid over provisioning on license renewals and support contracts
- **Make informed decisions** - Through improved visibility and understanding of your assets and their alignment to IT service delivery

Whether you want to extend the life of assets, efficiently monitor assets throughout their working life, or more **accurately match the deployment of assets to meet dynamic business needs**, our Asset Management Service enables you to take control of your entire environment and efficiently retire old assets in a timely manner.

Our services make it easy to:

Gain an accurate picture - A single centralised catalogue provides a 'single source of truth' on everything from your warranties to the support status of your entire hardware estate.

Identify systems suitable for decommissioning/IT recycling - From forgotten or misplaced assets to those additional to needs or redundant, we help you identify which systems are ideal candidates for decommissioning or IT recycling. Typically, this can be up to 30% of the estate.

Boost agility - With a reliable and accurate IT asset management programme in place, you'll be able to undertake quicker, more effective and more accurate migrations, upgrades and company-wide changes.

Mitigate risks - Utilise our 24/7 managed services to lower IT support costs, capture each asset's incident history and reduce governance risks through increased support for security and disaster recovery.

Refurbish, refresh - Gain greater oversight of asset lifecycles, so you can update assets and inventory ready for redeployment across the enterprise.

Improve productivity - Utilising enhanced technology support and integrating asset SLA data with help desk systems, we make it easier to manage your IT environment from a service and component level perspective. Alongside supporting faster incident resolution that gets people up and running as quickly as possible, we make it easy to automate commonly occurring incidents. All of which drives further efficiency and time savings.

Services designed to ensure you're able to efficiently manage the entire lifecycle of your organisation's IT assets,
