

## IT Asset Resale

Recover value from unused IT equipment in a compliant and responsible way

**JOHN ATKINS**  
IT Lifecycle Management Account Director

jatkins@bell-integration.com

We help organisations determine the best asset recovery and disposition strategy for their business. Ensuring they can **successfully realise the potential value of aging and unwanted equipment** in a secure and environmentally responsible way.

We intelligently repurpose IT equipment or assets that are unused or no longer required, preserving resources and increasing ROI on your IT hardware investments.

By adopting a proactive approach to optimising the IT lifecycle, you'll be to generate a positive return from excess or obsolete inventory and maximise the usable life of retired equipment.

### Our service enables you to:

- **Unlock potential value** - from ageing equipment and surplus assets in a compliant way
- **Realise resale proceeds** - that can be used to fund future transformation projects or new inventory purchases
- **Pursue an environmental sustainability strategy** - by remarketing used equipment in an accountable way
- **Improve space utilisation** - by minimising the need to store redundant assets

### Why work with Bell Integration?

Identity theft, standards compliance, data security and environmental liability are increasingly a top concern for today's businesses. Our Asset Resale service makes it easy to audit, process and resell IT equipment and devices in a highly robust, secure, and compliant manner.

Our **end-to-end process** takes care of all logistics and IT asset resale procedures. Freeing you to focus on other priorities.

Featuring Certificates of Destruction, detailed settlement reports and supporting documentation for all disposed and data wiped equipment, our service ensures you can demonstrate compliance with relevant information security standards and WEEE requirements.

### Our end-to-end service provides:

**Onsite Discovery** - We undertake a full site survey and equipment audit and assess assets to see if they're still usable, repairable or could be resold. That includes identifying where assets could be dismantled and parts or components recovered for reuse or sale.

**Secure Logistics and Processes** - We offer a secure de-installation and collection service, together with on or off-site data sanitation/hard drive wiping (featuring Blancco data erasure/destruction). All IT assets are then processed at our ADISA (Distinction) approved facility.

**Sustainable Resale or Donation** - Working closely with you, we can structure a process that enables you to promote sustainability initiatives and generate resale value from an extensive range of IT infrastructure assets including servers, network devices, storage and end user devices. Alternatively, we can donate your recycled IT equipment to a charity of your choosing.

**Fully Documented** - You'll gain detailed settlement reports, including Certificates of Destruction and supporting documentation for all disposed and Blancco data wiped equipment. All of which provides a fully auditable historic record for every asset that is destroyed, resold, or recycled that demonstrates compliance with industry and statutory regulations.

**Fully Compliant** - Systems and assets with no value are recycled in adherence with local regulatory guidelines such as EPA and WEEE.

We can help you recoup the residual value of your old assets, in a sustainable and compliant way.

### Contact us

From offices in London, Portsmouth, Wokingham, Krakow, Hyderabad and Singapore, we work with local and global customers across Europe and Asia-Pacific to streamline every aspect of their IT management strategies to maximise efficiencies and increase their ROI, year on year.
