

IT Recycling

Adopt an IT recycling, re-use and resale strategy that minimises e-waste and generates value

JOHN ATKINS
IT Lifecycle Management Account Director

We have over 25 years' experience advising customers on best practice policies, procedures and methodologies to **mitigate risk, reduce costs and remain secure.**

By rethinking how you manage the disposal of used and redundant IT assets, you'll be able to unleash recycle, resale, re-use, and charitable donation initiatives across the enterprise.

Alongside ensuring your IT asset disposition (ITAD) programme drives better asset utilisation that helps reduce your cost of ownership and capital requirements, you'll be able to demonstrate full compliance with today's stringent data security and sustainability requirements.

Our secure IT recycling solutions make it possible to:

- **Put CSR into practice** with sustainable e-waste programmes that minimise your organisation's contribution to landfill
- Reclaim value from redundant devices and components for re-investment into new IT and services
- **Reduce costs** by re-deploying usable assets into new environments
- **Participate in the circular economy** and showcase your organisation's sustainability credentials

From IT asset discovery tasks to risk assessments and regulatory controls, we'll create a tailored **secure asset recycling and disposal service that is fully compliant** with all waste directives, legal regulations, and industry specific compliance schemes.

So that you can:

- **Minimise the risk of data loss** - using our secure data destruction and conformant data sanitisation procedures
- **Demonstrate environmental compliance** - in line with the requirements of the European Waste Electrical and Equipment Directive (WEEE) for IT assets
- **Optimise ROI** - through recycling, re-use, and resale
- **Efficiently manage any used enterprise asset** - computers, servers, hard drives, mobile phones and more

Our end-to-end tailored approach includes:

- 

Risk Management - Experts in the compliance, governance, and industry regulations that apply to the disposal and recycling of hardware assets, we'll advise you on everything from the best route to achieve GDPR compliance to ensuring that adherence to the WEEE directive is maintained.
- 

Device Sanitisation - Optimising the recycling, re-use and re-sale of assets begins with the safe removal and disposal of data. We can help you prove compliance and protect your data with both onsite and off-site data destruction services that comply with a range of standards including NIST, HMG 1A5 and BSI. Ensuring your data is wiped to the correct level.
- 

Documented and Defined Processes - Our ADISA audited and documented processes deliver all the accountability, assurance, audit trails, reporting and certifications you'll need to ensure your corporate reputation remains intact.
- 

Secure Recycling Facilities - Our ADISA accredited facility means you can be confident we adhere to all requirements for the safe and secure handling of confidential data. All our employees are vetted, and assets are securely transported to our facility using our fleet of sealed trucks and lock-boxes. To assure an effective and ultra-secure chain of custody, we utilise onboard CCTV and asset tracking devices throughout to support best-in-class security processes.
- 

Optimised Recycle, Re-sale and Disposal Procedures - We'll evaluate and determine the final destination for assets, ensuring you're able to optimise any residual value via re-sale, trade-in or recycling. This includes a consideration of re-use for engineering, spares and break-fix, brokerage for re-sale, trade-in, internal sales to staff, charity donations and recycling as waste under the WEEE directive.

Why Bell

Over the years we've helped customers operating in a range of industry sectors **achieve their IT environmental and sustainability goals.**

As a leading provider in this field, financial services organisations, banks and government agencies and other ultra-security conscious and highly regulated organisations have entrusted us with their requirements.

Manage the retirement, recycling, re-use and sale of your legacy assets in a robust and compliant way.

Contact us

From offices in London, Portsmouth, Wokingham, Krakow, Hyderabad and Singapore, we work with local and global customers across Europe and Asia-Pacific to streamline every aspect of their IT management strategies to maximise efficiencies and increase their ROI, year on year.
