

## Lab as a Service

Develop, test and validate your deployment design and technology – before going live

Proof of concept lab services that provide organisations with certainty before deploying new solutions or making changes to critical IT infrastructure.

**Fast-track digital transformation initiatives and minimise technical risk when implementing new applications and infrastructure, our multi-vendor Lab as a Service (LaaS) enables you to evaluate and test products and services in a safe and controlled environment.**

Making it easy for organisations to achieve their validation and deployment goals in a cost-effective and timely manner, our labs provide customised proof-of-concept environments that make it possible to test out technologies in a variety of scenarios.

Alongside technical expertise and know-how, we provide everything needed to replicate your IT environment. So you can thoroughly evaluate your proposed hardware and application deployments in the initial planning stages of a project – ensuring nothing is left to chance.

### With Bell, you can:

- **Design, build, demonstrate and test** - innovative technology products and integrated architectural solutions prior to purchase.
- **Undertake product, application and platform comparisons** - and benchmarking.
- **Devise proof-of-concept and design validation testing.**
- **Evaluate solution performance** - sizing and disaster recovery strategy.
- **Assess release-to-release compatibility** - prior to upgrading in production environments.
- **Undertake testing for integration into public cloud platforms.**
- **Undertake migration design feasibility assessments.**
- **Validate configurations**

Skilled at helping growth-minded organisations find the right technology fit for their needs and make the most of their technology investments, **we ensure you won't encounter any unexpected surprises or setbacks** when it comes to deployment in the real world.

### Why work with Bell Integration

**Boost digital transformation initiatives** - We'll help you streamline the end-to-end process from idea generation to implementation. Ensuring you achieve a highly accurate development and deployment process that reduces the risk of delayed timelines or financial setbacks associated with potentially disruptive implementations.

**Vendor agnostic** - We create simulated lab environments that mirror your production environment, building in-depth testing scenarios that make it possible to evaluate and compare the features and capabilities of competing vendor solutions and make a fully informed selection. Now you can compare multiple vendor solutions and combinations of products, applications and platforms in a cost efficient and effective way.

**Proof of concept** - Validate your design to ensure the best possible solution fit, prior to purchase. We can run individual proof-of concept services or multiple proofs-of-concept simultaneously without ever exposing real data or damaging company critical applications. As well as documenting the entire testing process and outcomes, we'll helping you determine the pros and cons of each solution you test.

**Fast deployment** -Utilise our buying power, engineering and logistics to enable a rapid solution delivery.

**Mitigate migration risk** - Access our proven methodologies to reduce risk and speed up integration. We can help you understand the incompatibilities and dependencies that can get in the way of switching cloud vendors. Or undertake the due diligence that will save time and money when transitioning new services and applications to the cloud.

**We provide a complete portfolio of services that reduce the time, cost and risk that is often associated with modernising and managing enterprise hybrid infrastructure.**

### Contact us

From offices in London, Portsmouth, Wokingham, Krakow, Hyderabad and Singapore, we work with local and global customers across Europe and Asia-Pacific to streamline every aspect of their IT management strategies to maximise efficiencies and increase their ROI, year on year.
