Built in the cloud, Microsoft's modern workplace technologies simplify day-to-day IT management, streamline business operations and **empower employees to work securely anywhere** and at any time of the day.

Designed with agility in mind, Microsoft's integrated ecosystems of applications sync effortlessly to facilitate enhanced workforce productivity while maintaining the security and integrity of your systems and data.

As a Gold partner, we will help you take advantage of modern enterprise mobility and security developments with Microsoft.

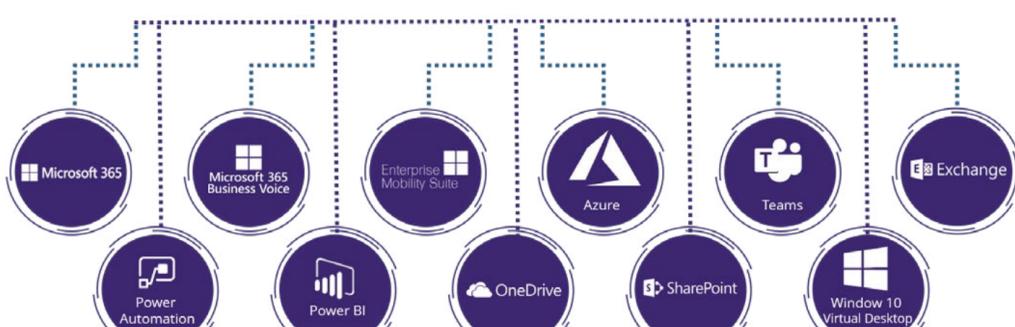

M365 productivity tools, digital workspaces enable you to:

- Spin up new locations in days and add new users in minutes
- Automate time-consuming tasks and workflows to boost user productivity
- Eliminate team and data silos
- Centrally administrate and secure ID, business applications, data and devices using integrated cloud based enterprise-grade, security solutions
- Initiate business analytics that give users real-time dashboards and decision support.

Alongside helping you navigate your choices, our forward thinking approach ensures you're able to pursue your digital ambitions in a lasting and sustainable way.

Stabilise - Optimise – Mobilise – Grow

With Microsoft and Bell Integration

Achieve a smooth transition with Bell Integration

Our proven migration methodology covers everything from assessing your readiness to transition through to designing, configuring and implementing your new environment, after which we're on hand to support, monitor, and maintain your new environment.

Our holistic approach ensures you maximise user adoption and gain optimum value from your investment, giving you a scalable and secure distributed workplace that's future-proofed for whatever is on the horizon.

Discovery - We know that the biggest initial challenge can be knowing where to start. Your infrastructure is complex, the goals of your business need to be met and your users need to be equipped with the right collaboration and productivity tools to deliver on these goals.

By engaging with your users and C-Suite personnel, we'll gain a complete picture of your business, after which we'll assess the readiness of your existing IT infrastructure and evaluate your network, data structures and workflows.

Having already got to grips with how your functional and commercial teams work, we next perform a gap analysis to generate the strategic, technical and process alignment recommendations that will form your roadmap to the modern workplace.

Design - Having established the features and functionality that are important to you, we'll identify which Microsoft applications represent the best fit for your organisation. We will define the security and compliance requirements that will be critical to ensuring your IT systems remain secure, compliant and hardened.

As part of the design process, we'll work with you to agree appropriate availability and disaster recovery requirements and help you define role-based access controls in readiness for secure implementation.

We'll also keep in mind that your new environment needs to enable full collaboration, seamless communication and operational efficiency. That includes making it easy to introduce additional Microsoft modules to meet your evolving business needs.

Migrate - We take care of all pre-migration tasks, creating a detailed configuration and migration schedule that covers the setting up of advanced features such as multi-factor authentication and single sign-on.

Our end-to-end approach ensures we execute a tightly defined sequential migration process that is designed around your unique operations. Working closely with your IT team, **we ensure you achieve a smooth transition to your new environment** that is seamless for users.

Run - We provide adoption training and support services that help you accomplish more, faster. Taking care of everything from licensing to proactively monitoring and optimising your new environment, our end-to-end managed services include IT help desk and end-user support. And if you need it, we're on hand to provide guidance on how to evolve your modern office and stay ahead of the curve.

We can help you facilitate and enhanced modern workplace that improves productivity while maintaining the security and integrity of your systems.
