

## IoT as a Service

Scale IoT solutions rapidly from architecture to implementation with Bell Integration

**NIGEL HARLEY**  
Head of IoT Solutions Development

T +44 (0) 2392 825925

Our IoT-as-a-Service is designed to **simplify your innovation journey** from initial proof-of-concept to fully deployed rollout in weeks – not months or years

We know that delivering a successful IoT initiative requires a diverse set of skills and capabilities to ensure the ecosystem of devices, data and processes performs as expected – and is capable of scaling quickly.

Our IoT-as-a-Service delivers rapid access to all the resources, specialisations and technology that you will need to architect, run and scale IoT solutions. With no false stops, delays or unforeseen outcomes.

### Our IoT-as-a-Service makes it easy to:

- **Explore**, test and verify use cases
- **Design** an end-to-end solution which meets your specific business needs
- **Manage IoT device procurement**, on-boarding and implementation at scale
- **Eliminate** data silos and tap into real-world data quickly
- **Manage, monitor and support** IoT devices and infrastructure 24x7, or in conjunction with your customer facing service teams
- **Access analytics** and data visualisation services that unlock new levels of business intelligence to drive new business revenue models
- **Evolve and extend** your IoT initiatives, optimising its transformational potential across the enterprise

Featuring everything from **hardware delivery to fully managed support options**, our suite of IoT services enables you to select the specific specialist know-how and assets you need.

### With Bell Integration you'll be able to:

**Design and Build IoT solutions at speed** - Our IoT Labs make it easy for stakeholders across the business to explore and evaluate IoT use cases, experiment, and safely test IoT applications, so they can be deployed with certainty.

We can help engineer full integration of the final end-to-end IoT solution with your existing IT architectures and data feeds. Along the way, we'll ensure the right security structures are in place to protect your IoT sensors and data.

**Deploy quickly and scale fast** - Streamline and accelerate the build-out of your IoT solution, with our device management platform and task driven onboarding reduces the risk when scaling a large number of devices remotely.

From certified IoT device catalogues that simplify procurement, through to the warehousing, distribution, deployment, configuration and onboarding of devices, our logistics and provisioning services are ready to help you deploy at scale.

With Bell you'll be able to navigate the options and accommodate future growth at a predictable cost. That includes deploying new features and capabilities as your IoT solution evolves.

**Take advantage of a fully managed IoT infrastructure** - We offer a comprehensive choice of managed components and services designed to bridge the operational divide – and deliver all the maintenance and support you need.

Eliminating any need to invest in manpower or specialist infrastructure, we can take care of everything from device management to handling automated service operations on your behalf. We'll also ensure your IoT infrastructure is monitored and supported 24x7.

With dedicated Service Desk options that ensure issues are investigated and resolved fast – we make certain your IoT devices continue to perform as expected.

**Build meaningful insights** - Eliminating data silos and ensuring that real-world IoT data is appropriately ingested and transformed into smart data is all part of the services we provide.

We'll help you capture, ingest, integrate and intelligently leverage data from IoT devices. So you can accelerate business value and foster business innovation.

From delivering access to higher quality and more standardised data, to enabling federated data ecosystems that will deliver increased visibility and insights for business stakeholders, we empower you to gain business insights – and optimise how you collect and analyse data.

### A complete solution portfolio

Alongside ensuring your IoT project gets off to a great start, we're also on hand to rapidly scale, monitor and support your IoT devices and infrastructure.

That includes optimising how you integrate and utilise real-world IoT data to work smarter. Everything from elevating operational performance, to identifying ways to boost revenue generation and improve customer satisfaction.

Enabling the complete IoT project lifecycle, Bell Integration makes it easy to **innovate efficiently – and with purpose.**

Helping you transpose IoT project concepts into a workable reality that will drive new business value fast.

### Contact us

With over 25 years of experience and offices across the globe, Bell Integration delivers Data Centre, Cloud and End User services within some of the world's most prestigious customer environments. With capabilities covering technology provision, consulting, project & managed services and asset retirement services, we add value to our customers at several touch points throughout the life-cycle of their IT environments.
