Take advantage of a **low-cost, flexible, pay-as-you-go** cloud infrastructure that makes it easy to scale resources on demand and respond fast to your business needs

**Making the move to Amazon Web Services (AWS) will enable you to take advantage of a low-cost, flexible, pay-as-you-go cloud infrastructure that makes it easy to scale resources on demand and respond fast to evolving customer and business needs. But that's not all.**

Today, millions of organisations – startups, large enterprises and government agencies – are using AWS to lower costs, improve resource utilisation, increase security, boost performance, become more agile and innovate faster.

But despite its popularity, migrating, optimising and managing your AWS environment can present a challenge. Without the right migration strategy in place, you risk compromising the security, reliability, availability and uptime of your new AWS environment.

Plus, with so many features to choose from and configure, you need to ensure you don't over provision or mis-manage your cloud resources. Putting everything in place to ensure the smooth running of business operations while making sure that costs don't spiral out of control. And that's where Bell Integration can help.

We ensure your AWS migration is delivered on time with **zero disruption to your operations**

## Transition to AWS with confidence

With over a decade of experience in AWS migration, we've helped hundreds of organisations transition tens of thousands of workloads with no unexpected costs or security vulnerabilities.

From identifying the best possible AWS services and products for your new environment to defining and executing a carefully sequenced migration roadmap for your business, we'll ensure your AWS migration is delivered on time with zero disruption to your operations.

### With Bell Integration, you'll gain:

- **A smooth cloud adoption process** – we provide the skills, planning and strategy needed to assure a dynamic, scalable and automated operating model that's secure, compliant and cost-optimised. Ensuring that your AWS solution is right sized for your needs.
- **A tightly sequenced and controlled AWS migration** – utilising our tried and tested vClarus methodology, we'll assess your systems and applications, identify all dependencies and data migration requirements, and get you to your new AWS Cloud environment with no delays.

## Get the most out of your AWS infrastructure

Our Managed Services help you unlock the maximum value and performance from your AWS solution. Whether that's ensuring you only pay for what you need - when you need it, or taking care of the day-to-day management of your infrastructure operations, we'll help you maximise the ROI of your AWS solution.

Experts at optimising AWS environments to reduce operational overheads while powering enhanced performance and productivity, we ensure you can leverage the truly transformative potential of AWS Cloud.

## With our Managed Services you gain:

**Expert advice on cloud billing and consumption** – AWS pricing models can be complex, making it difficult to budget for and easy to overspend.

**Skilled cloud infrastructure management** – we take care of your environment, so you don't have to. Ensuring that spend is tracked and utilisation is controlled to prevent unused, idle or over-provisioned resources. That includes regularly analysing your AWS configuration to ensure your service selection is always optimised.

**24x7 proactive monitoring of your environment** – from analysing alerts and responding to incidents, maintaining governance, security, access and compliance controls, as well as handling change, security and configuration updates, we ensure your critical applications and workloads stay up and running.

**Bullet-proof recovery** – we take care of disaster recovery and manage a backup strategy that ensures you can get up and running fast and recover from any potential data loss scenario.

**Fast innovation** – we constantly review your environment, ensuring your AWS platform pace with evolving business needs. That includes helping you take advantage of the latest technologies, so you can initiate new use cases or experiment and innovate faster.

We provide migration and ongoing management of your AWS environment to ensure it's continuously optimised, meaning you only pay for what you need
