Bell ensure your systems are kept **secure, compliant, up-to-date and running smoothly**

Without a consistent and effective patch management strategy in place, you risk leaving your business open to performance slowdowns, random reboots or cyber-attacks that will compromise sensitive data or operations.

Without a consistent and effective patch management strategy in place, you risk leaving your business open to performance slowdowns, random reboots or cyber-attacks that will compromise sensitive data or operations.

The best way to safeguard and monitor the integrity of your infrastructure and information systems is to enlist the help of patch management experts like Bell Integration.

Utilising the latest best practices, automation and monitoring technologies, we'll handle the whole patch management process at scale. Keeping your systems secure, compliant, up-to-date and running smoothly.

With Bell Integration you can:

- **Reduce risk** - ensuring the timely execution of patches and the consistent and persistent monitoring of your environment.
- **Resolve exceptions** - we proactively manage exceptions and unexpected patch failures and will also oversee any industry-specific compliance requirements.
- **Optimise your IT resource utilisation** - we take care of every aspect of your patch management strategy, releasing your IT teams to focus on other mission-critical tasks.

Proactive patch management support is crucial to ensure that your environment is kept **maintained and protected**

Delivering peace of mind for every scenario

Our deep understanding of security and patch management methodologies in a variety of different operating environment ensures disruptions are minimised and that your software and applications are kept updated and always run smoothly. All of which ensures you maintain a strong security posture.

Our unique tried and tested service approach ensures that patches are managed, validated, tested and deployed in a methodical and compliant manner.

Deploying patches - using a formalised and structured process, we constantly verify and confirm the current status of your operating systems, server and desktop applications and more.

2 Pre-testing complex updates for key production systems - to avoid any unforeseen business consequences, ensuring that back-ups are in place to provide service security at all times.

3 Policy-driven patch management - our expertise includes Linux, Unix, Microsoft and other third-party application environments and our structured change management procedures include roll-back plans and systems backups.

Data centre operations- our extensive and industry-leading patch management capabilities enable you to reduce risk and vulnerabilities and minimise downtime, procedures include roll-back plans and systems backups.

Ensuring you maintain software compliance and minimise security vulnerabilities
