

Oracle Linux

Migrate to Oracle and reduce your Linux Enterprise Distribution costs, whilst improving security & compliance

Following Red Hat's announcement that access to **RHEL source code is now only available to paying customers**, enterprises wanting to gain clarity and certainty about their future licensing costs are making the switch to Oracle Linux.

Oracle Linux is RHEL compatible and offers optimisations for your Oracle databases that other Linux distributions do not.

Featuring competitive licensing and support offerings and a highly optimised and secure environment for development and distribution, Oracle Linux is an ideal choice for organisations seeking a stable Red Hat Enterprise Linux (RHEL)-compatible alternative.

Engineered for open cloud infrastructures and critical workloads, Oracle Linux supports the latest x86 and Arm architectures across on-premises, multi cloud and edge environments.

Free to use and easy to download, Oracle Linux is capable of handling a wide variety of workloads, including heavy duty databases, application servers and DevOps.

The advantages of from making the move to Oracle Linux:

- **A choice of OS kernels** – including the security optimised Unbreakable Enterprise Kernel (UEK) and the Red Hat Compatible Kernel (RHCK) which enables users to run existing RHEL software without modification.
- **Non-intrusive updates** – Oracle Linux is the only Linux distribution to offer zero-downtime updates using Ksplice.
- **Cloud native DevSecOps** – based on open standards and APIs defined by the Open Container and Cloud Native Computing Foundation (CNCF).
- **Powerful automation and management tools** – including Oracle Enterprise Manager, Oracle Linux Virtualisation Manager, Oracle Linux Automation Manager and Engine and Oracle Linux Manager.
- **A choice of support options** – Basic, Premier and Extended.

Helping you harness the full potential of Oracle Linux

From ensuring your Oracle Linux environment is optimised with licensing cost containment in mind to ensuring your distributions have a consistent and effective patching management strategy in place, we'll help you ensure you get best value from your Oracle Linux deployments.

We'll help you navigate all the service and support options for your development and production systems and will help you design and implement an implementation that delivers against all your business objectives and requirements. That includes ensuring everything is configured optimally, to advising on the best automation tools to increase security in your base operating environment.

With Bell Integration you'll be able to **take full advantage of the agility and performance boosting capabilities offered by Oracle Linux** while building on an operating cost structure that won't hamper your organisation's future plans or ambitions.

Make the switch with Bell Integration

As an Oracle Partner with over 20 years' experience implementing Oracle technologies that will optimise the performance, reliability, availability and security of your services while reducing costs, our experienced experts know their way around Oracle Linux.

Offering a comprehensive end-to-end service, Bell Integration will work with you to ensure you're able to migrate with minimal downtime and can realise the benefits of Oracle Linux faster.

Working with Bell, you'll be able to:

Engineer a risk-free migration – we ensure you experience the smoothest possible transition to your new Linux environment, with no risk of business disruptions, data loss or overruns. We provide consultancy, discovery, planning and execution of license migration to ensure your project is delivered on time and within budget.

Right-size your license requirements – we assess, manage and align your Linux licensing requirements with your business needs. Typically, we save customers over 50% of their licensing distribution costs.

Keep applications online – with Oracle's Ksplice, you can rollout security patches and apply kernel and user space updates to your Linux systems while they are still running.

Reduce costs – reboots require costly supervision. With Ksplice, updates are installed in second without interrupting running applications of the people using these applications.

Increase security & resilience – take advantage of automated patching to reduce vulnerabilities. Our patch management service ensures the latest updates are always applied.

We can help you design and implement the Oracle Linux environment that represents a best fit for your business.

Contact us

With over 25 years of experience and offices across the globe, Bell Integration delivers Data Centre, Cloud and End User services within some of the world's most prestigious customer environments. With capabilities covering technology provision, consulting, project & managed services and asset retirement services, we add value to our customers at several touch points throughout the life-cycle of their IT environments.
