Accelerating the Digital Transformation Journey

Helping organisations drive efficiency, productivity, resilience and sustainability

Helping you realise the vision

Whether you want to reimagine your IT operations for enhanced performance, interoperability and agility, or are looking to harness game-changing technology for long-term value creation and ROI, Bell Integration can help.

From design to delivery, we provide all the specialist capabilities and know-how needed to fully align IT your environments with clearly defined business objectives. Plus, we'll ensure your IT services and infrastructure are future-proofed in readiness for whatever comes next.

For over 25 years, Bell's market-leading technology consultation and managed services have enabled organisations to transform their IT capabilities and elevate their business productivity and cost efficiency. Our 360-degree approach and multi-vendor services eliminate the pain points associated with the deployment, management and support of today's modern hybrid IT environments.

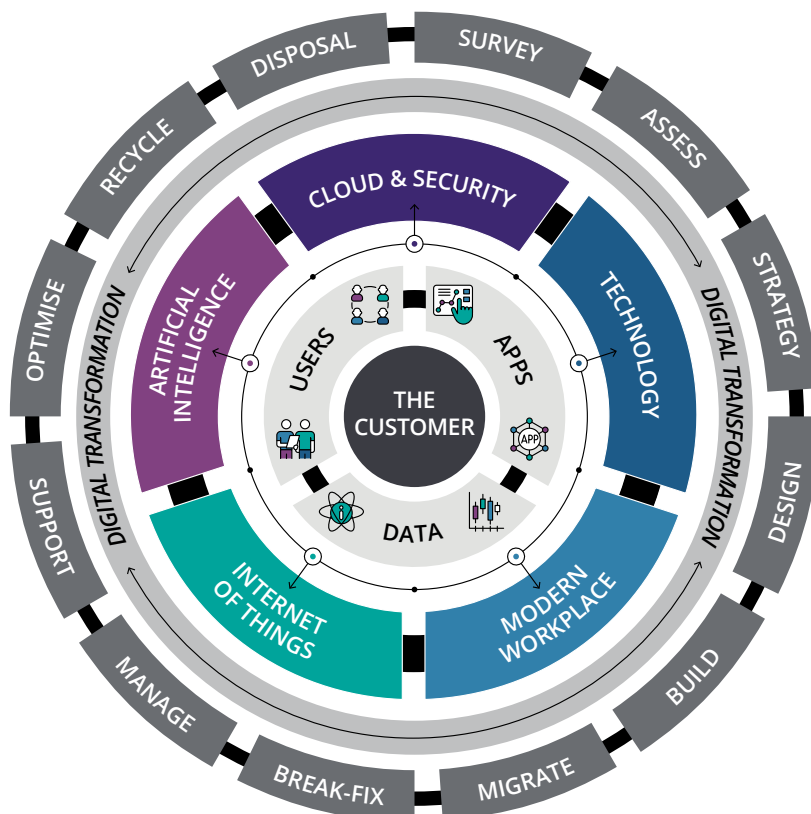

Trusted by many global Fin-techs, telcos, and government and public sector organisations, our customers depend on us to ensure their IT services and infrastructure are always available, scalable, sustainable, and resilient.

Experienced at working with organisations of all shapes and sizes and from every industry sector, we take pride in our ability to deliver solutions on a truly global scale.

A COMPREHENSIVE TRANSFORMATION FRAMEWORK

We know that getting digital transformation right requires a nuanced approach that considers every aspect of your business – including organisational and workforce transformation needs.

Designed to help you evolve in an adaptive and highly agile way, without disruption or risk, our transformation framework encompasses all the capabilities you need to power effective and continuous digital transformation. It's a 360-degree approach that's focused on three key digital imperatives – users, data and apps.

-  Customers can engage at any point stage of the 360-degree lifecycle.
-  Clearly defined target markets with customer aligned solutions.
-  Adopting leading technology such as AI to deliver service and cost excellence.
-  Multinational services with global reach.
-  Private, public and multicloud solution offerings.
-  Growing both direct and indirect sales channels.
-  Differentiating vClarus solution driving cloud adoption.
-  Continued investment in AI, automation and people.

ARTIFICIAL INTELLIGENCE

Drive automation, optimise processes and improve CX.

Today's organisations are leveraging AI technologies to change how business gets done. Everything from initiating automation to driving operational efficiencies and enhancing employee productivity. Through to using AI to do more with data and build new business models.

Expert at helping organisations realise measurable value from AI and automation, our extensive portfolio of specialist services makes it easy to hit the ground running – and achieve your business objectives faster.

We make it easy to initiate new AI capabilities that will advance digital transformation across the enterprise.

As AI specialists, we can help you implement productivity-focused AI that enables workers to do what they do faster and more efficiently. Or AI resources that increase the uptime, availability, and performance of your enterprise IT operations. Plus, we provide a choice of AI-infused services that make it possible to supercharge customer interactions and deliver exceptional CX. But our expertise doesn't end there.

With Bell, you'll be able to take advantage of game-changing AI capabilities that make it possible to reimagine business models, unlock new growth, and enable next-generation AI-powered products and services.

ALIGNED SERVICES

- AI Operations

We make it easy to initiate **new AI capabilities** that will advance digital transformation across the enterprise.

CLOUD & SECURITY

Cloud strategies that catalyse business transformation, innovation, resilience and growth.

Wherever you are on your cloud journey, we'll help you determine the right cloud strategy for your business. Whether you're looking to modernise DC systems, migrate to the public cloud – or both – our cloud services enable you to sustainably unlock value and agility using public cloud, multi-cloud, hybrid and on-premises platforms.

Our cloud experts can help assess the best solution for your application and infrastructure needs. That includes assessing your cloud readiness and advising whether or not to utilise public cloud providers or build and maintain your cloud capabilities elsewhere.

Through on-going optimisation of your cloud platform, we will help you make smarter architecture choices that will drive efficiency and meet business needs. That includes harnessing IaaS, PaaS and SaaS platforms to extend your infrastructure and improve your operational agility, efficiency and security.

INTERNET OF THINGS

Simplify and scale IoT deployments that unlock new business value and data insights.

Because IoT isn't a 'one size fits all' enterprise solution, we'll make sure you benefit from an integrated and end-to-end solution that is designed to meet your specific business needs. By integrating new IOT data with existing sources, you'll be able to leverage real-world IoT insights to drive operational improvements, boost revenue and elevate your customers' experience.

We make it easy to bring your business vision to life with tailored solutions that make it possible to connect, collect and start processing IoT data quickly. Bringing together everything you need to kickstart your IoT project – sensors, connectivity technologies, cloud infrastructure, data analytics, and access and security controls – we can help you plan and implement your IOT strategy.

Having helped you build and deploy your IoT ecosystem and ensure it's fully integrated with your systems, we're also able to handle day-to-day operational tasks like monitoring and maintaining your IoT devices or helping you to manage data effectively. Plus, we can help you perform advanced analytics on your IOT data and turn real-time insights into proactive actions.

With Bell Integration, you'll be able to gain a better understanding of your assets, your processes and your data.

MODERN WORKPLACE

Agile work environments that fuel productivity and keep teams engaged.

The nature of work has changed, and today's employees expect to be able to work from anywhere and on any device. But that's not all. They also expect to be able to take advantage of seamless communication and collaboration platforms and digital tools that enhance their productivity and their workplace experience.

With competitive advantage now dependent on enabling a flexible and tech-enabled workforce, we help organisations reinvent the workplace experience and re-evaluate how work is organised.

In addition to taking advantage of highly scalable and resilient platforms like Microsoft 365 and Google Workspace that simplify and streamline communications and deliver instant access to the tools and business applications employees need to do their jobs, we're also able to put the power of automation and data insights directly into the hands of your workforce.

TECHNOLOGY

Unleash new capabilities to meet the demands of today – and tomorrow.

Designed to help your organisation transform and evolve without disruption, our services enable you to grasp digital opportunities fast.

From the data centre to the desktop, we make it possible to transform your operating model and respond to new market and end-user demands. Whether that's deploying digital technologies that deliver new capabilities to the workforce. Or building out your core infrastructure so you can initiate a new ecosystem to power a differentiated services model tailored to the exact needs of the business.

Expert at helping organisations seamlessly bridge the gap between the old and the new, we're experienced at executing successful change programmes at scale. Our unmatched technical expertise, combined with functional industry expertise and global delivery capabilities, ensure we're able to help organisations extract maximum value from their technology investments.

Putting Our Customers First

We help organisations navigate the realities of today's IT and resolve the challenges it presents. So they can drive change, innovate and realise new business opportunities.

We believe in the power of change and measure our success by the success of our customers. Indeed, creating value for every organisation we work with is our core mission.

Bringing together leading-edge technologies, deep technical know-how and unrivalled as-a-service capabilities, we enable customers to accelerate their modernisation agenda and achieve their speed-to-value goals. We do this using the brilliant tools we've put in the hands of our outstanding people.

As a transformation partner, we're committed to ensuring that every organisation we work with derives tangible business benefits from the solutions we implement. Working as an extension of their business, we take full responsibility when it comes to delivering on our promises.

Bringing together leading-edge technologies, deep technical know-how and **unrivalled as-a-service capabilities**, we enable customers to accelerate their modernisation agenda and **achieve their speed-to-value goals**.

Cost

The rising cost of IT is a constant issue for any business stakeholder. Smaller budgets and rising expectations of internal and external stakeholders are now the norm. At Bell we are renowned for saving our customers millions of pounds through our pragmatic yet innovative approach to technology. Savings come from our understanding of the different consumption models, either new or legacy, and creating solutions which most appropriately respond to these challenges. Our services span procurement, transformation, managed services and disposal of assets.

Agility

The need for commercial agility has never been greater for successful companies. A desire to either move to new markets in a swift and efficient way or ensuring you maintain your position in a competitive market is now vital for business success. A company will struggle to achieve commercial agility with stagnant infrastructure and processes. Bell offers unique migration and maintenance solutions plus innovative rental and procurement options to make use of OPEX and CAPEX budgets ensuring companies are agile and competitive.

Risk

Technology innovation can drive your business forward, but any change must be delivered whilst maintaining a strong risk profile, either personal, corporate or cyber risk. With this in mind Bell has created solutions that combine technology and experience to ensure systems remain robust throughout changes that are required to maintain and grow market share. Over 25 years' of working with some of the world's largest corporations has given us an enviable track record of fulfilling these requirements.

Sustainability & Compliance

We help organisations accelerate their transition to more sustainable operations that reduce their carbon footprint and environmental impact. From user devices to data centres and networks, we help IT leaders enable new sustainability initiatives that will transform consumption habits. Our consulting and managed service teams are also expert at helping organisations to proactively address today's increasingly complex risk and regulatory compliance challenges.

Contact us

With over 25 years of experience and offices across the globe, Bell Integration delivers Data Centre, Cloud and End User services within some of the world's most prestigious customer environments. With capabilities covering technology provision, consulting, project & managed services and asset retirement services, we add value to our customers at several touch points throughout the life-cycle of their IT environments.
